

NONCON

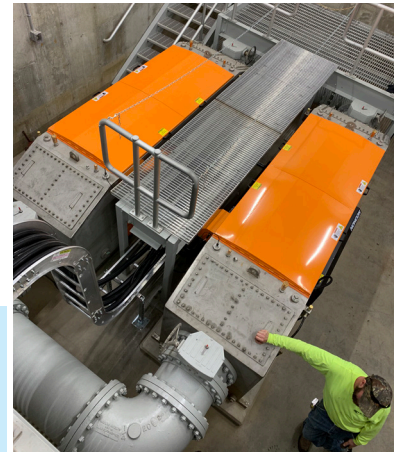

S E R I E S

GLASCO UV

Highly transparent fluoropolymer tubes (aka Teflon) transport liquids and UV light in the 254 nm wavelength penetrates the walls and provides for disinfection.

Over the last 50 years, Glasco UV has installed ten of thousands of UV systems for various applications (process, drinking, beverage, sugars, juices, enhanced waters and wastewater). Our NONCON series uses state of the art fluoropolymer materials and UV lamps that are manufactured in the United States. The advantage of the NONCON is that the tubes do not foul and UV lamps are not in the process liquids or water. Electronics and controls are remotely located in engineered Ballast Control Centers.
